ABSTRACT

Banda is a website built using HTML, CSS, and JavaScript. It serves as a platform for users in Saudi Arabia to connect with service providers for various needs. The website features a visually appealing and responsive design, ensuring compatibility across different devices and screen sizes.

The HTML structure of the website is organized and semantically meaningful, providing a solid foundation for the content and components. CSS is used to style the website, creating an attractive and consistent visual experience. The layout is designed with user-friendliness in mind, making it easy for users to navigate and find the information they need.

JavaScript is utilized to enhance the functionality of the website. It powers features such as a form validation. JavaScript is also used to implement interactive elements, such as dropdown menus, forms, and modal windows.

Student Information System has this functionally

1) A Home page

This the home page which is the page which display some information about banda and display video about banda.

2) Shop with Us

This page content some of products which banda sales them.

3) Group Members

This is the page display the member students in the group it display the randomly by JavaScript.

4) Contact Us

This is the page content form which the user can contact with banda by it.

5) Team

This is the page display the team of banda company.

6) About Us

This is the page display some info about banda and display the Discover Panda Story of banda.

Language used in this project

HTML

HTML or HyperText Markup Language is the widespread markup language used to create net pages.

HTML is written in the structure of HTML factors consisting of tags enclosed in attitude brackets (like). HTML tags most often come in pairs like <h1> and </h1>, though some tags signify empty factors and so are unpaired, for instance . The first tag in a pair is the begin tag, and the 2nd tag is the quit tag (they are additionally known as opening tags and closing tags).

The cause of a net browser is to study HTML archives and compose them into seen or audible net pages. The browser does now not show the HTML tags, however makes use of the tags to interpret the content material of the page. HTML describes the shape of a internet site semantically alongside with cues for presentation, making it a markup language as a substitute than a programming language.

HTML factors structure the constructing blocks of all websites. HTML lets in photos and objects to be embedded and can be used to create interactive forms. It offers a skill to create structured files by way of denoting structural semantics for textual content such as headings, paragraphs, lists, links, prices and different items. It can embed scripts written in languages such as JavaScript which have an effect on the conduct of HTML internet page

CSS

CSS used to be first developed in 1997, as a way for Web builders to outline the seem to be and experience of their Web pages. It used to be supposed to enable builders to separate content material from plan so that HTML ought to operate greater of the characteristic that it used to be at first based totally on the markup of content, except fear about the graph and layout.

CSS did not reap in recognition till round 2000, when Web browsers started the use of extra than the primary font and shade factors of CSS.

Web Designers that do not use CSS for their format and improvement of Web websites are unexpectedly turning into a aspect of the past. And it is arguably as necessary to apprehend CSS as it is to comprehend HTML - and some would say it was once greater necessary to be aware of CSS.

Style sheet refers to the file itself. Style sheets have been used for file graph for years. They are the technical specs for a layout, whether or not print or online. Print

designers use fashion sheets to insure that their designs are printed precisely to specifications. A fashion sheet for a Web web page serves the identical purpose, however with the delivered performance of additionally telling the viewing engine (the Web browser) how to render the file being viewed.

<u>JavaScript</u>

JavaScript is a high-level, interpreted programming language primarily used for building interactive web applications. It was originally developed by Brendan Eich at Netscape Communications in 1995 and has since become one of the most popular programming languages in the world.

About Panda

Discover Panda Story

- Headquartered in the Kingdom of Saudi Arabia, Panda Retail Company is one of the main retail chain businesses in the Middle East and the biggest grocery retailer in the country, with more than 182 stores in 39 cities
- Panda operates 2 types of stores, Hyper Panda (larger stores) and Panda Supermarkets.
- With more than 95 million customers visiting our stores every year, we operate 4 main distribution centres in the country with a fleet of more than 500 temperature-controlled trucks to deliver over 30,000 SKUs of food and non-food products to our stores.

Because the code is very long I can't show it here I will only show part of it and the other you can see it in the zip file.
